DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14,16, 17, 28, 30-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Johnson et al.

With regard to claim 14, Johnson et al (US 6,373,188) disclose a light-emitting device comprising:

a semiconductor light emitting diode (22, 20) capable of emitting light of a first wavelength, the semiconductor light emitting diode having a light-emitting surface, and

a plurality of regions of phosphor (60 or 30; col. 7, lines 52-54) provided on the light-emitting surface (col. 5, lines 8-14), wherein:

at least some of the plurality of regions of phosphor (the phosphor segments on a columnar light-emitting surface) are capable of converting light of the first wavelength to visible light of a second wavelength;

the plurality of regions of phosphor form a pattern (Fig. 2); and the plurality of regions of phosphor (Fig. 3, r.n.82, 82) are separated by regions of the light-emitting surface without phosphor (alternatively, r.n. 60, 60 separated by r.n. 65)

Art Unit: 2833

With regard to claim 16, Johnson et al disclose that the regions of the light-emitting surface without phosphor are at least partly covered with a light-transmitting layer (83).

With regard to claim 17, Johnson et al disclose that a thickness of the light-transmitting layer is substantially the same as a thickness of phosphor in the regions of phosphor.

With regard to claim 28, Johnson et al disclose the plurality of regions of phosphor forming a chessboard pattern and the plurality of regions of phosphor being, separated by regions of the light-emitting surface without phosphor.

With regard to claim 30, Johnson et al disclose that the thickness of the phosphor layer (30) is such that all the light of the first wavelength incident on the phosphor layer is converted to light of a different wavelength.

With regard to claim 31, Johnson et al disclose that others of the plurality of regions of phosphor are capable of converting light of the first wavelength to visible light of a third wavelength (since more than one visible phosphor disposed in segments can be utilized)

With regard to claim 32, Johnson et al disclose that at least one opticalelement (36) for mixing the emitted light of the first and the second wavelength.

Claims 14,16, 17, 28, 30-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Vriens et al.

With regard to claims 14, 29 Vriens et al (US 4,822,144) disclose a light-emitting device comprising:

a semiconductor light emitting diode (col. 3, lines 51-52, since LED is a semiconductor device that emits narrow-spectrum light) capable of emitting light of a first wavelength, the semiconductor light emitting diode having a light-emitting surface, and

Art Unit: 2833

a plurality of regions of phosphor (for example regions R , G,B) provided on the light-emitting surface (the surface of 10), wherein:

at least some of the plurality of regions of phosphor are capable of converting light of the first wavelength to visible light of a second wavelength;

the plurality of regions of phosphor form a pattern (any regularly repeated arrangement); and the plurality of regions of phosphor (for examples, R-regions) are separated by regions of the light-emitting surface without phosphor (spaces between R and G phosphor segments)

With regard to claim 16, Vriens et al disclose that the regions of the light-emitting surface without phosphor are at least partly covered with a light-transmitting layer (13).

With regard to claim 17, Vriens et al disclose that a thickness of the light-transmitting layer is substantially the same as a thickness of phosphor in the regions of phosphor.

With regard to claim 28, Vriens et al disclose the plurality of regions of phosphor (R,G,B) forming a chessboard pattern and the plurality of regions of phosphor being separated by regions of the light-emitting surface without phosphor(spaces between R and G phosphor segments)

With regard to claim 30, Vriens et al disclose that the thickness of the phosphor layer is such that all the light of the first wavelength incident on the phosphor layer is converted to light of a different wavelength.

With regard to claim 31, Vriens et al disclose that others of the plurality of regions of phosphor are capable of converting light of the first wavelength to visible light of a third wavelength (since R,G,B phosphors are utilized)

Art Unit: 2833

With regard to claim 32, Vriens et al disclose that at least one optical element (14) for mixing the emitted light of the first and the second wavelength.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 29 rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson et al in view of Duggal et al.

Johnson et al discloses all of the limitations except for producing white light.

Duggal et al (US 6,294,800) disclose (col. 2,lines 13-29) that converting the LED radiation energy with some phosphor compositions produces substantially white light.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the Johnson son et al with the phosphor compositions, as taught by Duggal et al, to achieve visual efficiency of the device.

Claim 29 rejected under 35 U.S.C. 103(a) as being unpatentable over Vriens et al in view of Duggal et al.

Vriens et al discloses all of the limitations except for producing white light.

Duggal et al (US 6,294,800) disclose (col. 2,lines 13-29) that converting the LED radiation energy with some phosphor compositions produces substantially white light.

Art Unit: 2833

Therefore, it would have been obvious to one having ordinary skill in the art at the time the

invention was made to provide the Johnson son et al with the phosphor compositions, as taught

by Duggal et al, to achieve visual efficiency of the device.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Alexander D. Gilman whose telephone number is 571 272-2004. The

examiner can normally be reached on Monday-Friday, 10:30 a.m. - 8:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Paula A. Bradley can be reached on 571 272-2800 ext. 33. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you

would like assistance from a USPTO Customer Service Representative or access to the

automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
